

Fundamentals of Web Media Technology

Unit 3

Lecture Overview

HTML Tables | Forms

Lecture Overview

TOPIC	OBJECTIVES
HTML Tables ➤ INTRODUCTION	Tables present data in a 2-dimensional structure of rows and columns that enables an organization of data by viewing it on 2 different axes.
HTML Tables (long) ➤ STRUCTURE	Table Elements thead, tbody, tfoot
HTML Tables ➤ OLD CODE	Table Attributes width, height, color, bgcolor, align, style, cellpadding, cellspacing, etc.
HTML Forms (Intro)	Form Element 9 basic form controls

HTML Tables

Table <table> | Table Row <tr> | Table Cell <td> | Table Header <th>

Table Examples

Tables - Basic Code

```
<table>
  <tr>
    <td>[1 1]</td>
    <td>[1 2]</td>
    <td>[1 3]</td>
  </tr>
  <tr>
    <td>[2 1]</td>
    <td>[2 2]</td>
    <td>[2 3]</td>
  </tr>
  <tr>
    <td>[3 1]</td>
    <td>[3 2]</td>
    <td>[3 3]</td>
  </tr>
</table>
```

[1 1]	[1 2]	[1 3]
[2 1]	[2 2]	[2 3]
[3 1]	[3 2]	[3 3]

Tables – Spanning a Column

```
<table border="1">
  <tr>
    <td colspan="2">[1 1]</td>

    <td>[1 3]</td>
  </tr>
  <tr>
    <td colspan="3">[2 1]</td>
  </tr>
  <tr>
    <td>[3 1]</td>
    <td>[3 2]</td>
    <td>[3 3]</td>
  </tr>
</table>
```

[1 1]	[1 3]	
[2 1]		
[3 1]	[3 2]	[3 3]

Known as “merged cells” in MS Word

Tables – Spanning a Row

```
<table border>
  <tr>
    <td rowspan="2">[1 1]</td>
    <td>[1 2]</td>
    <td rowspan="3">[1 3]</td>
  </tr>
  <tr>
    <td>[2 2]</td>
  </tr>
  <tr>
    <td>[3 1]</td>
    <td>[3 2]</td>
  </tr>
</table>
```

[1 1]	[1 2]	[1 3]
	[2 2]	
[3 1]	[3 2]	

Known as “merged cells” in MS Word

Tables – Column Headers

```
<table align="center" border="1">
  <tr>
    <th></th>
    <th scope="col">col 1</th>
    <th scope="col">col 2</th>
  </tr>
  <tr>
    <th scope="row">row1</th>
    <td align="center">1</td>
    <td align="center">2</td>
  </tr>
  <tr>
    <th scope="row">row2</th>
    <td align="center">3</td>
    <td align="center">4</td>
  </tr>
</table>
```

	col 1	col 2
row1	1	2
row2	3	4

Tables – Headers & Footers

HTML Tables – Old Code

Tables – Old Code

Specify formatting

- Borders
- Height/width
- Cell spacing/padding
- Cell background (fill) color
- Text formatting

Specify for each level

- `<table>` – affects the entire table
- `<tr>` – affects this row
- `<td>` & `<td>` – affects this cell

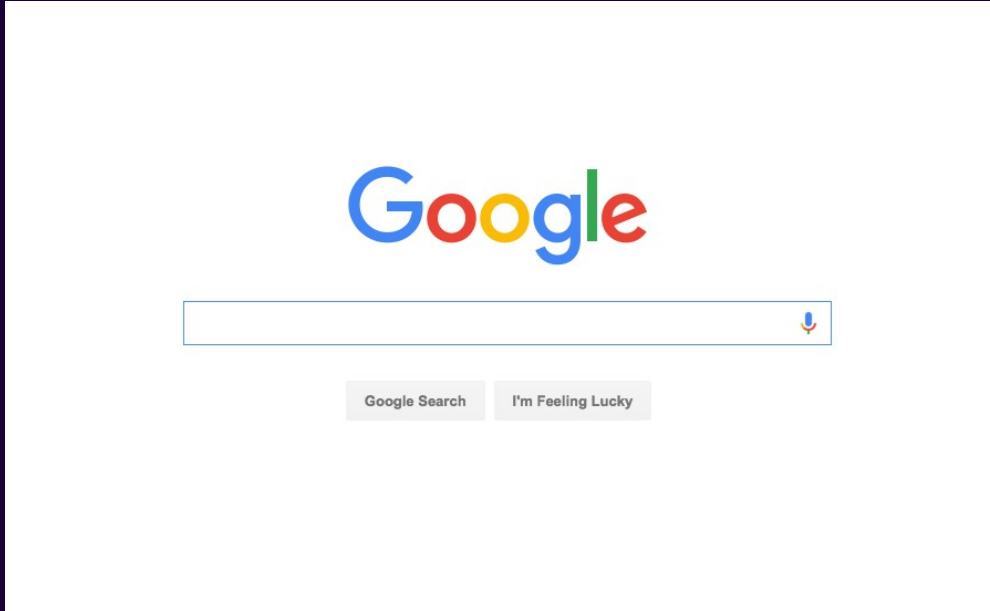

Tables – Old Code Example

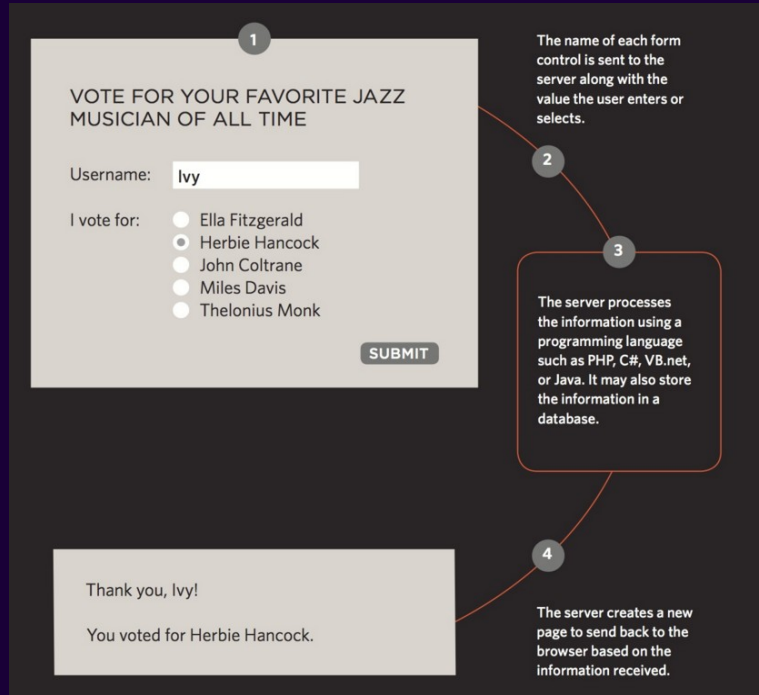

HTML Forms

Elements | Types | Attributes

Best Known Form on the Web

How Forms Work

HTML <form> – Structure

```
<html>
  <head>
    <title>Form Structure</title>
  </head>
  <body>
    <form action="http://www.example.com/subscribe.php"
method="get">
      This is where the form controls will appear
    </form>
  </body>
</html>
```

HTML <form> – Attributes

action – where the data goes when submitted

method – HTTP *request method* to use (get/post common)

sub-elements – used to build form (input + submit)

9 Basic Form Controls

<p>Text input (<code><input></code>)</p> <p>Used for a single line of text such as email addresses and names.</p> 	<p><input type="password"></p> <p>Like a single line text box but it masks the characters entered.</p> 	<p>Text area (<code><textarea></code>)</p> <p>For longer areas of text, such as messages and comments.</p> 
<p>Radio (<code><input type="radio"></code>)</p> <p>For use when a user must select one of a number of options.</p> 	<p><input type="checkbox"></p> <p>When a user can select and unselect one or more options.</p> 	<p>Drop-down (<code><datalist></code>, <code><select></code> & <code><option></code>)</p> <p>When a user can select from a number of options.</p> 
<p>Submit button (<code><button></code>)</p> <p>To submit data from your form to another web page.</p> 	<p>Image buttons (<code></code>)</p> <p>Similar to submit buttons but they allow you to use an image.</p> 	<p>File upload (<code><input type="file"></code>)</p> <p>Allows users to upload files (e.g. images) to a website.</p> 

HTML <form> – Radio Buttons, Text, & Submit

```
<head>
  <title>Pac-12 North Division</title>
</head>
<body>
  
  <h3>Vote for your favorite Football Team</h3>
  <form action="http://courses.washington.edu/bimd233/bimd.php" method="post">
    <input type="radio" name="team" value="Washington Huskies">Washington
Huskies<br />
    <input type="radio" name="team" value="Washington Cougars">Washington
Cougars<br />
    <input type="radio" name="team" value="Stanford Cardinals">Stanford
Cardinals<br />
    <input type="radio" name="team" value="California Bears">California Bears<br />
    <input type="radio" name="team" value="Oregon State">Oregon State Beavers<br />
    <input type="radio" name="team" value="Oregon">Oregon Ducks<br />
    <br/>
    My State:
    <input type="text" name="state"><br/>
    <input type="submit">
  </form>
</body>
```

HTML <form> – Name/Value Pairs

name=value

Examples:

team=Washington Huskies, state=washington

HTML <form> – Username and Password

```
<html>
<head>
  <title>Password Form</title>
</head>
<body>
  <h3>Enter Username and Password</h3>
  <form action="password.php" method="post">
    Username: <input type="text" name="username"><br>
    Password: <input type="password" password="password"><br>
    <input type="submit">
  </form>
</body>
```

Enter Username and Password

Username: bob@uw.edu

Password:

Submit

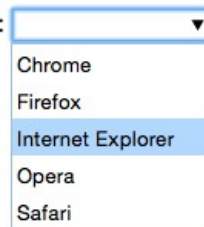

HTML <form> – Listbox Using <datalist>

```
<body>
  <h3>Browser Select</h3>
  <form action="chooser.php" method="get">
    <label>Choose a browser from this list:
      <input list="browsers" name="myBrowser" />
    </label>
    <datalist id="browsers">
      <option value="Chrome">
      <option value="Firefox">
      <option value="Internet Explorer">
      <option value="Opera">
      <option value="Safari">
    </datalist>
  </form>
</body>
```

Browser Selector

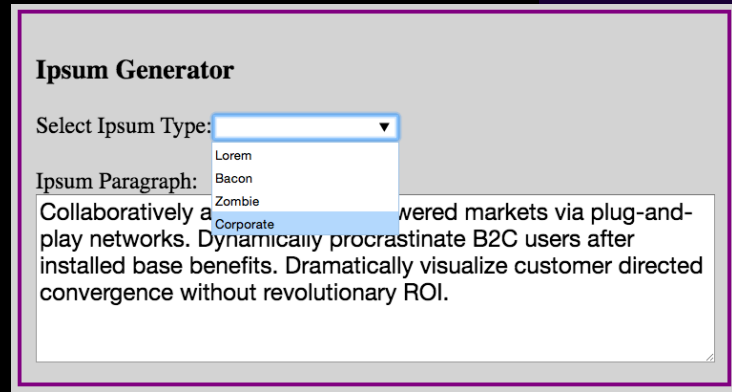

Choose a browser from this list:

▼
Chrome
Firefox
Internet Explorer
Opera
Safari

HTML <form> – <datalist> & Textbox

```
<body>
  <h3>Ipsum Generator</h3>
  <form action="generator.php" method="get">
    Select Ipsum Type:<input list="ipsum">
    <datalist id="ipsum">
      <option value="Lorem">
      <option value="Bacon">
      <option value="Zombie">
      <option value="Corporate">
    </datalist><br><br>
    Ipsum Paragraph:<br>
    <textarea name="message" rows="5" cols="60"></textarea><br/>
  </form>
</body>
```

Ipsum Generator

Select Ipsum Type:

Ipsum Paragraph:

HTML <form> – Listbox Using <select> & <option>

```
<body>
  <form action="http://www.example.com/profile.php"
    <h3>What service do you listen to music
on?</h3>
    <select name="devices">
      <option value="itunes">iTunes</option>
      <option value="spotify">Spotify</option>
      <option value="pandora">Pandora</option>
      <option value="other">Other</option>
    </select>
  </form>
</body>
```

What service do you listen to music on?

iTunes
✓ Spotify
Pandora
Other

HTML <form> – Listbox & Submit Image Button

```
<body>
  <form action="http://www.example.org/power."
        method="post">
    Select House Light <input list="lights"
    <datalist id="lights">
      <option value="Living Room">
      <option value="Family Room">
      <option value="Master Bedroom">
      <option value="Kitchen">
    </datalist><br><br>
    <input type="image"
      src="images/power-button-off.png"
      width="120" height="120" />

  </form>
</body>
```

The image shows a web form with a light gray background and a purple border. At the top left, the text "Select House Light" is displayed. To its right is a dropdown menu with a downward arrow. The dropdown is open, showing four options: "Living Room", "Family Room" (which is highlighted with a blue background), "Master Bedroom", and "Kitchen". To the left of the dropdown is a large, circular power button icon with a gray gradient and a white power symbol in the center.

HTML <form> – Listbox with Multi-Select Enabled

```
<body>
  <div class="container">
    <form action="http://www.example.com/profile" method="post">
      <p>Do you play any of the following instruments?</p>
      <select name="instruments" size="3" multiple>
        <option value="guitar" selected="selected">Guitar</option>
        <option value="drums">Drums</option>
        <option value="keyboard" selected="selected">Keyboard</option>
        <option value="bass">Bass</option>
      </select>
    </form>
  </div>
</body>
```

Do you play any of the following instruments?
(You can select more than one option by holding down control on a PC or command key on a Mac while selecting different options.)

HTML <form> – Checkboxes

```
<body>
  <h3>Please select your favorite
    <form action="http://www.example.com" method="post">
      <input type="checkbox" name="service" value="itunes" /> iTunes
    />iTunes
      <input type="checkbox" name="service" value="lastfm" /> Last.fm
      <input type="checkbox" name="service" value="spotify" /> Spotify
    </form>
  </body>
```

Please select your favorite music service(s):

☒ iTunes ☐ Last.fm ☒ Spotify

HTML <form> – File Uploads

```
<body>
  <div class="container">
    <form action="http://www.example.com/upload.
method="post">
      <p>Upload your song in MP3 format:</p>
      <input type="file" name="user-song"/><br>
      <input type="submit" value="Upload"/>
    </form>
  </div>
</body>
```

Upload your song in MP3 format:

Choose File No file chosen

Upload

RECAP

Review of today's lecture

RECAP : `<table>`

- ▶ `<table>` element used to add tables to web pages.
- ▶ Tables are rendered row by row using `<tr></tr>`.
- ▶ Within each row there are `<td></td>` elements (cells) (or `<th></th>` in the case of header rows).
- ▶ Cells are merged using `rowspan` and `colspan` attributes.
- ▶ Long tables are logically split into sections with:
`<thead>` | `<tbody>` | `<tfoot>`
- ▶ There are OLD CODE table attributes still in practice.

RECAP

- ▶ Long tables are logically split into sections with:
`<thead>` | `<tbody>` | `<tfoot>`
- ▶ OLD CODE attributes still in to control PRESENTATION.
- ▶ FORMS have 9 major CONTROLS:
 - Text Input, Password Input, and Text Area
 - Radio Buttons, Checkboxes, and Dropdowns
 - Submit Button, Image Button, File Uploads
- ▶ FORMS submit their data to web servers via GET or POST

Homework

- Finish code lab 3
- Quiz 1 this weekend
